

Dermatology Coding Alert

Reader Question: Let Medical Necessity Rule Code Choice

Question: Our dermatologist is a very thorough documenter and treats very sick patients. Because he documents his EMR so well, almost all of his cases qualify for 99214s and 99215s. Since the documentation supports his code selections, is this acceptable?

Nevada Subscriber

Answer: The answer depends on the medical necessity of the encounters. Your electronic health record will most likely offer an E/M code suggestion at the end of each visit □ but that doesn't mean you can use that to justify all high-level codes.

Several practices state that their physicians "thoroughly document" the history and physical exam elements for all conditions, leading to high-level codes, even if the medical decision-making (MDM) doesn't support 99214 or 99215. They justify this by pointing out that established patient office visits only require two out of three criteria (history, exam, medical decision making).

Reality: CMS indicates in its Carriers Manual that "Medical necessity is the overarching criterion for payment in addition to the individual requirements of a CPT® code." In addition, the 1995 E/M Guidelines state, "The documentation of each patient encounter should include: reason for the encounter and relevant history, physical examination findings and prior diagnostic test results."

If your patient has a poison ivy rash and you're documenting a complete dermatological exam, Medicare would not consider that "relevant." Therefore, you should use your EHR's code selection as a suggestion, but the final code choice should be up to the clinician, and should be based on medical necessity and the nature of the presenting problem.

Don't forget: When determining medical necessity, take into consideration the patient's risk at the end of the office visit. Is the problem high-risk with associated co-morbidities necessitating a follow-up visit within a month or less? Is the problem stable with moderate risk and no need for follow-up for six months or a year? These should help you to decide the difference between 99214 and 99215.
