Reader Questions: Foot FBRs Differ From Soft-Tissue FBRs

Question: Our physician performed a foreign-body removal (FBR) on a patient with a wood splinter in the subcutaneous tissues of her right foot. We reported 10120 and received a denial. Should I appeal, or did I code improperly?

North Dakota Subscriber

Answer: In this case, there is a more specific code for a foot FBR. Code 10120 (Incision and removal of foreign body, subcutaneous tissues; simple) is in the Integumentary part of CPT's Surgery section. It is for simple, subcutaneous incision and removal of foreign bodies when no more specific code exists.

For reporting subcutaneous FBRs from the foot, a more specific code does exist. When your physician removes a foreign body from a patient's foot, choose from:

- 28190 -- Removal of foreign body, foot; subcutaneous
- 28192 -- ... deep
- 28193 -- ... complicated.
