

## **Part B Insider (Multispecialty) Coding Alert**

### **Path/Lab Codes Hit With More CCI Edits**

The Correct Coding Initiative version 13.2 is probing molecular-probe codes deeply.

A number of pathology and laboratory codes will become components of codes 88384-88386, for array-based evaluation of multiple molecular probes. They include lab test codes 83893-83897, 83902-83909, 88271-88275 and 88365-88368. You also can't bill 88384 or 88385 with 88386. But you can use a modifier to override any of these edits.
