

## Part B Insider (Multispecialty) Coding Alert

### Reader Question: Assign 3 'Vitals' to Just 1 Exam Bullet

Question: I read your previous article on "double dipping" with great interest (the Insider, Vol. 12, no. 30) and I have a follow-up question. Can you please explain how taking the vital signs contribute to determining the E/M service's physical exam?

Answer: Checking any three vital signs will count as one bullet in the physical exam, based on the 1997 documentation guidelines for E/M services, which you can find at [www.cms.gov/MLNEdWebGuide/25\\_EMDOC.asp](http://www.cms.gov/MLNEdWebGuide/25_EMDOC.asp).

Here's how it works: Under the 1997 documentation guidelines for E/M services, performing (and documenting) any three of the following seven vital signs will count as one bullet in the constitutional system/body area of the general multisystem examination:

1. Sitting or standing blood pressure
2. Supine blood pressure
3. Pulse rate and regularity
4. Respiration
5. Temperature
6. Height
7. Weight

The 1995 documentation guidelines do not specify the type or number of vital signs that count toward "taking vital signs," but you need only one vital sign from the list above to count as one bullet and satisfy the vital signs credit for a 1995 physical examination.

Ancillary staff (for example, a nurse) may measure and record the vitals.
