

## Eli's Rehab Report

### Correction: Nerve Conduction Study Coding

The article Solutions to Nerve Conduction Study and EMG Coding Challenges in the May 2001 Physical Medicine Coding Alert contained an error. If a physiatrist performs both motor and sensory studies on two nerves of a patient's left hand/wrist, and he repeats the studies on two nerves of the patient's right hand/wrist, the coding should be as follows:

95900 x2 units, -LT

95900 x2 units, -RT

95904 x2 units, -LT

95904 x2 units, -RT

We apologize for the error.
