DRUG ALERT: Check Out The Skin Patch For Overactive Bladder

Good news for people with overactive bladders: The **Food & Drug Administration** recently approved a new skin patch (Oxytrol) that can ease jumpy bladders. Data show the patch produces anticholinergic side effects (constipation, dry mouth, etc.) similar to that of a placebo. For more info, go to www.fda.gov/cder/foi/label/2003/21351_oxytrol_lbl.pdf.)
