

OASIS Alert

Clarification: Get this Ambulation Update

In "Follow The 3 Ws To Accurately Track Ambulation Improvement" (OASIS Alert v11n12), the response given for Scenario C is 0; however, the reasoning for that answer applies to Scenario D.

Clarification: In the case of Scenario C, the patient relied on a walker (two-handed device) to ambulate safely. Therefore, the score for this item should be 2 (Patient needs a **two-handed device** on level surfaces **and/or** another person present on uneven surfaces **or** stairs).
