Sample Document: Don't Let Medical Discrepancies Slip Through The Cracks

Use this tool to keep prescribers and caregivers on the same page.

Reconciling medication discrepancies is hard enough when your agency is the only caregiver involved, so you can imagine how difficult reconciliation becomes when you factor multiple prescribers and caregivers into the equation. Add a form like this one, created by **Care Transitions**, to your policies and procedures and instruct your clinicians to use it across time points. This will help your agency resolve discrepancies and keep your patient safe.
