In other news....Harvard Medical School researchers have developed a prototype

- Harvard Medical School researchers have developed a prototype return-on-investment calculator that can measure the value of prevention services, according to a press release.

Everyone seems to agree that it's cheaper to prevent health problems than to treat them. Still, most of the money spent on healthcare goes to treatment.

One of the problems preventive medicine faces: It's hard to show how much money is actually saved for a service that doesn't actually fix an immediate problem.
